- Document 1: Sekimoto E. et al., Blood, November 2003, Vol. 102, No. 11, page 933a, Abstract, #3474
- Document 2: Kipriyanov, S.M. et al., J. Mol. Biol., June 2003, Vol. 330, No. 1, pages 99 to 111
- Document 3: Laurent Genestier et al., Blood, 1997, Vol. 90, No. 9, pages 3629 to 3639
- Document 4: Hudson P.J. et al., J. Immunol. Methods, 1999, Vol. 231, No. 1-2, pages 177 to 189. Review
- Document 5: JP 7-503622 A (The Dow Chemical Company), 20 April 1995, entire description
- Document 6: CO M.S. et al., J. Immunol., 1994, Vol. 152, No. 6, pages 2968 to 2976

Document 1 sets forth a monoclonal antibody (2D7), and indicates that said monoclonal antibody recognizes HLA class I HLA-A.

Document 2 sets forth a bispecific scFV antibody containing two variable heavy chain domains and two variable light chain domains (see fig. 1, etc.).

Document 3 sets forth MoAb90 and YTH862, which are

International application No.
PCT/JP2004/018501

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; ditations and explanations supporting such statement

monoclonal antibodies for human HLA class IA.

Documents 4 and 5 both disclose sc(Fv)2.

Document 6 sets forth a method of obtaining DNA which codes monoclonal antibodies.

The invention set forth in claims 1 to 28 involves an inventive step in relation to documents 1 to 6.

The invention set forth in claims 1 to 28 of this application is not disclosed in documents 1 to 6.

The invention set forth in claims 1 to 14 and 16 to 28 does not involve an inventive step in the light of a combination of documents 1, 2 and 6.

It would be easy for a person skilled in the art to use the method set forth in document 6 to obtain the DNA which codes a monoclonal antibody (2D7) set forth in document 1, and to prepare a bispecific scFv antibody of the monoclonal antibody (2D7) using the method for preparing a bispecific scFv set forth in document 2 from the DNA thus obtained.

The invention set forth in claim 1 to 7 and 17 to 28 does not involve an inventive step in the light of a combination of documents 3 to 6. It would be easy for a person skilled in the art to conceive of using the method set forth in document 6 to obtain DNA which codes the monoclonal antibodies MoAb90 and YTH862 set forth in document 3, and to prepare the sc(Fv)2 of the monoclonal antibodies MoAb90 and YTH862 using the methods of preparing sc(Fv)2 set forth in documents 4 and 5 from the DNA thus obtained.

International application No.
PCT/JP2004/018501

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The invention set forth in claim 15 involves an inventive step in relation to documents 1 to 6.

The sc(Fv)2 having the amino acid sequence set forth in SEQ ID NO: 2 described in claim 15 is an sc(Fv)2 of a monoclonal antibody (2D7), but said sc(FV)2, as set forth in fig. 4 and 5, has the same activity as 2D7DB which is a diabody of the monoclonal antibody (2D7), and as shown in fig. 6, markedly improves the stability in the blood, and a person skilled in the art would not be able to predict this feature.

International application No.
